

## Professional Experience

---

### Consultant

### Torq

Jan 2026 - Current

Consulting firm placing developers with clients in automotive, healthcare, and aerospace.

- Diagnosed a Blazor re-render issue causing feature flag API calls on every UI interaction; migrated to the SDK with local caching and parallelized calls, reducing load time from **3+ seconds to under 8ms**
- Built a case management page integrating with Dynamics 365 via REST API, enabling users without D365 access to view, filter, and create support cases with attachments directly from the platform

### Full Stack Web Developer

### LineLeader

June 2023 - December 2025

Software platform that simplifies marketing, registration, payment processing, and operations for early education.

- **Increased development output by 115%** year-over-year with **28% higher task complexity**, now delivering **20% of team's output** matching senior developer productivity
- Led a critical reporting feature refactor in **Meteor.js** and **Vue.js** that **eliminated recurring weekly bugs**, reducing post-implementation bug reports to zero
- Collaborated with cross-functional teams to **implement secure data segregation** for the **nation's largest after-school childcare organization**, creating an **isolated AWS environment** with automated testing via Cypress and Jest

### Full Stack Web Developer

### Kadince

February 2022 - December 2022

Web application designed to help banks organize and manage community involvement efforts including events, donations, loans, investments, and more.

- Developed full-stack features using **Ruby on Rails**, **GraphQL**, and **PostgreSQL** with **React.js**, **Redux**, and **Material UI** on the frontend
- Partnered with sales team to resolve customer issues, providing feature training and troubleshooting support

## Personal Projects

---

### Autonomous AI Development Pipeline | n8n, Claude Code, Linear, GitHub, Vercel, Node.js, Docker

- Built a system that converts rough ideas into merged pull requests with minimal manual coding, using Claude agents to handle implementation while the developer manages specs and reviews
- Five **n8n** workflows listen for **Linear** and **GitHub webhooks** to refine tickets into detailed specs, trigger AI agent implementation, auto-deploy preview environments via **Vercel**, and track session state across features

### Twitch-Controlled Minecraft Platform | Node.js, React.js, Firebase, Twitch API, DigitalOcean

- Built a custom Minecraft server enabling Twitch viewers to control gameplay through donations and subscriptions, **increasing monthly subscribers by 171% (148 to 401)** and **donations by 188% (\$423 to \$1,219) over 3 months**
- Scaled into a multi-streamer platform with Firebase authentication, Twitch Pub/Sub for real-time donation tracking, and a React.js dashboard for streamers to customize pricing and redemption triggers

## Education

---

### University of Texas at Dallas

Dallas, TX

- **Major:** Bachelor of Computer Science 2021
